PROFESSIONAL SUMMARY

Computer Science student graduating in January 2027 with practical experience building software for research, business operations, and the web. Work includes a locally hosted LLM pipeline for Arabic research data, contributions to an integrated HR and payroll ERP, and full-stack web platforms. Works mainly with Python, Django, React, TypeScript, and PostgreSQL, focusing on practical solutions to real workflow and data problems.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL

Frontend Development: React, Next.js, HTML5, CSS3, Tailwind CSS

Backend & Databases: Django, Django REST Framework, REST APIs, Supabase, PostgreSQL, SQLite

AI & Data Science: PyTorch, Scikit-learn, NLP, LLMs, Sentence-Transformers, Pandas, NumPy

Tools & DevOps: Git, Docker, Linux, Postman, GitHub Actions

WORK EXPERIENCE

Research & Innovation Consultant (Part-time) Jul 2026 – Nov 2026

Institute of Research and Consulting Studies, Islamic University of Madinah | Madinah, Saudi Arabia

- Addressed the difficulty of processing unstructured Arabic research text by engineering a locally hosted LLM pipeline with Python, Ollama, and Qwen that extracts and structures research information, reducing the institute's dependence on paid external AI services.
- Made processing of inconsistent source material more dependable through Arabic text normalization, validation, retry handling, and controlled database writes.
- Organized researcher expertise using multilingual Sentence-Transformer embeddings and clustering, and designed and maintained the PostgreSQL data structures that store the processed results.
- Prepared research data and analytics for the institute's research commercialization platform in collaboration with the platform engineer, and presented progress updates to university leadership.

Software Engineer Intern Jun 2026 – Jul 2026

Asaqefah for Business Development | Saaed HR & Payroll ERP | Madinah, Saudi Arabia

- Contributed to Saaed, an integrated HR and Payroll ERP built to replace disconnected HR, payroll, and finance processes that depended on manual handoffs between departments.
- Developed backend services with Django REST Framework and user-facing modules with React and TypeScript on a PostgreSQL database.
- Implemented payroll workflows and automated the transfer of approved payroll records to Finance general ledgers, reducing manual data transfer between HR and Finance.
- Applied data validation and role-based access controls to keep employee and payroll information consistent and restricted to authorized users, working with HR and Finance stakeholders.

PROJECTS

Islamic University CRIS – Research Information Management System (Graduation Project)

Technologies: React, TypeScript, PostgreSQL, PL/pgSQL, Supabase, Scopus API, OpenAlex API

Case study: github.com/Abdulqader-Alshihabi/Islamic-University-CRIS

- Research publications and researcher information were spread across separate sources, making it hard to keep records consistent, detect duplicate publications, and see research activity as a whole.
- Developed a centralized platform with ETL processing in PostgreSQL and PL/pgSQL that integrates publication data from Scopus and OpenAlex, identifies duplicate records, and enriches researcher profiles.
- Added analytical dashboards and review workflows so research activity can be examined and records verified from one place.

Shakkel Learn – Corporate Learning Management System

Technologies: React, TypeScript, Supabase, Tailwind CSS, Tiptap

Live: learn.shakkel.store

- Organizations needed a structured way to onboard and train employees, manage learning content, track progress, and coordinate the responsibilities of different users.
- Developed a corporate learning platform that brings these activities together, with role-based experiences for learners, instructors, and administrators and support for Arabic and English.
- Implemented course authoring, timed assessments, certificates, and HR reporting.

Shakkel Store – B2B Industrial Supplies Platform

Technologies: React, TypeScript, Supabase, PostgreSQL, WebSockets

Live: shakkel.store

- Industrial customers needed an easier way to browse products and request tailored quotations, while staff needed better visibility into incoming quotation requests and support tickets.
- Developed a B2B/B2C platform with product filtering and an automated request-for-quotation workflow, giving customers a structured way to request quotes.
- Added real-time updates for quotation requests and support tickets over WebSockets so staff can see new requests as they arrive.

EDUCATION

Bachelor of Science in Computer Science Expected Graduation: January 2027

Islamic University of Madinah | Madinah, Saudi Arabia

Relevant coursework: Data Structures and Algorithms, Database Systems, Software Engineering, Artificial Intelligence, Machine Learning, Deep Learning, Data Mining

CERTIFICATIONS

- Advanced Artificial Intelligence (Computer Vision) – KAUST Academy & Universidad Politécnica de Madrid, 2026
- Introduction to Artificial Intelligence (with Distinction) – KAUST Academy & Universidad Politécnica de Madrid, 2026
- KAUST Academy AI Specialization Selection – KAUST Academy & Islamic University of Madinah, 2026
- Asaqefah SandBox Innovation Program – Asaqefah & Amazon Web Services (AWS), 2026
- Introductory Artificial Intelligence Program – KAUST Academy & NTDP, 2025
- Improving Deep Neural Networks – DeepLearning.AI, 2024
- Calculus, Linear Algebra, and Probability & Statistics for Machine Learning (three courses) – DeepLearning.AI, 2024
